

HIGH

TurnSec

Around the clock control on entering and departing pedestrians

The newly designed TurnSec turnstile is particularly developed for 'Outdoor Perimeter' use. Everywhere where sensitive sites have to be secured against unauthorised entry the TurnSec is invaluable. The TurnSec is very suitable for entrances in industry, airports, car parks, military sites as well as in sport and leisure facilities. The TurnSec is an optimal solution combining user friendliness with security. The modular ready made, fully assembled, tested and

'plug and play' design ensures that the installation on-site is fast, only electricity and a foundation are needed. The TurnSec is available in a 90- and a 120 degrees rotor version. The Gunnebo TurnSec boasts a modular design, so that service or exchanging components – in case of malfunction – is very easy.

For users with high person flow multiple TurnSec versions are also possible.

TurnSec

Around the clock control on entering and departing pedestrians

The Gunnebo TurnSec motor boasts a particularly noiseless design when rotating and locking. Optically the Turnsec blends perfectly into the adhering fence.

Function

Manual operated

- Entrance and exit direction freely rotating
- One direction closed

Automated version

- Different entry and exit modes are possible

The TurnSec can optionally be equipped with direct welded mesh fence connections, palisades connectors or connections for sliding gates.

The automated TurnSec version can optionally be equipped with entrance control devices such as card readers, coin machines, iris scanners and remote control units.

“Everything from one source”
